Tomcat 7.0.37 Released 2013-02-18

The Apache Tomcat Project is proud to announce the release of version 7.0.37 of Apache Tomcat. This release contains a small number of bug fixes and improvements compared to version 7.0.35. The notable changes include:

- Fix the regression in the JspC tool that is used to pre-compile JSP pages introduced in 7.0.35. See [issue 54440](#) for details. Patch provided by Sheldon Shao.
- Improve handling of `ciphers` and `sslEnabledProtocols` options for the BIO and NIO connectors. The behaviour of each connector is now the same. The values provided are pruned to those supported by the SSL implementation and when none of the remaining values are supported a warning is issued and the connector configured with an empty set of options (which essentially disables HTTPS support).
- Update to Commons Daemon 1.0.13.

Full details of these changes, and all the other changes, are available in the [Tomcat 7 changelog](#).
